

Week 1 and week 2:

My work list update :

In the week1 , I learnt about JavaScript advance , how to use it in website creation,

Problem that I faced while creating the front end of the websites?

1. I am not able to make the website pages responsive
2. I am not able to write the JavaScript according to the logic required
3. Not able to use the proper JavaScript function

Solution: I learnt about the responsiveness of the page can be done using media query , I knew about it but still haven't used any of the time so , I learnt about it again use it with different break points .I learnt JavaScript advance and try to make some simple example using the advance concept and then I use the JavaScript in the webpages creation.

Week2:

I learnt about all above mentioned things and start to create the final frontend part of the project

I have attached the GitHub repository link in which I upload all the files for the project

GitHub repository link: <https://github.com/shrutibharti/protfolio-wesite>

Currently I learning about the backend for the final attachment of frontend part of the website to their backend part , I am also learning that how we can attach the data using API and how we can sue it for website.

Thanking you for supporting
